Keymacro is an utility that allows your Windows machine to generate keystrokes and key sequences. Unlike most keystroke editors, keymacro is a low-level library, allowing you to generate keystrokes as if you were typing them yourself. As an application, it has not much to offer in terms of user interface. Just let it run, and when the keys are pressed, the program will tell you about it. No options, no nothing. That doesn't mean that it doesn't offer some very nice features, however. First of all, it is actually quite easy to integrate this tool with other programs. Even a well-written application can use a keymacro library to generate keystrokes, and you can even hook it up to an external keyboard so that it is used even when your laptop is closed. Another interesting thing that keymacro can do is generate sequences of keystrokes, and if you're not familiar with the term, it is nothing more than a series of keystrokes. If you type the following sequence of keystrokes, the application will perform a series of actions. After you type 'W' and 'A', keymacro will paste the text 'Windows' and '7'. After you type 'c' and 'o', keymacro will paste the text 'command prompt' and 'cd'. After you type 'x' and 'e', keymacro will paste the text 'exchange', 'edit', and'start'. This may sound like a lot, but if you just think about it, it's not a lot. You just have to open the application, generate the keystrokes, and tell it which ones to generate. An interesting feature of keymacro is that it offers a shortcut to generate a sequence of keystrokes that you can copy and paste anywhere on your Windows machine. For example, if you type 'F1' and 'R' (with space), you can then paste this keystroke sequence anywhere you want. This can be very useful if you want to have a customized Windows system that does not have all the built-in features. With that out of the way, what else can we say about keymacro? Well, it doesn't have much to offer in terms of features, but that is also a plus. It does, however, have a small font that you can select from, and it includes a few built 77a5ca646e
